A technical line drawing of a vertical rack designed for holding and drying laboratory glassware. The rack has a rectangular frame with a central vertical channel. On either side of this channel are several vertical slots of varying heights, intended for holding flasks or beakers. At the top of the rack, there is a horizontal slot for a lid or a container. In the center of the rack, a funnel is positioned to allow liquid to drain into a collection vessel at the bottom. The entire unit is supported by four small feet at the base.
