

WIRELESS BUTTON

Experience the convenience of complete shower control without the need for batteries, Wi-Fi, or Bluetooth connectivity. Our wireless button uses clever kinetic energy technology, generating enough power with every press to activate your shower and bring it to a comfortable 38°C.

COMPATIBLE
WITH ALL
TOGO SERIES
INTERFACES

Perfect for wet room installations, the wireless button allows you to position your main controls exactly where you want them. Rather than placing controls at the room entrance, install them within the showering area and use the wireless button to start your shower before stepping in.

- 45mm x 45mm
- Compatible with full TOGO range

Once showering, there's no need to move away from the water to make adjustments. Temperature changes and outlet diversion can all be controlled from within easy reach, delivering a more convenient and enjoyable showering experience.
